An important outcome of PD/A CRSP research is the positive economic impact that results from farmers adopting new technologies. While a given technology may maximize yields, others may yield higher profits. Also, research that benefits the greatest number of farmers will result in growth and development of aquaculture and increase the overall impact of the PD/A CRSP.

Section 2e. of each proposed investigation must be a statement describing the quantifiable anticipated financial or ancillary impacts of the research. Also, identify the primary economic beneficiaries of the information, technologies, or management practices developed by the project.
