ABSTRACT

Templates were developed to collect all the necessary price and quantity data required for the development of enterprise budgets. The production technologies most appropriate for development have been selected. We are currently completing the data collection phase of this project. With all the data in hand, we will then enter the price and quantity data means into the spreadsheet templates to generate the enterprise budgets. From the enterprise budgets we will prepare the pro forma balance sheets, income statements, and cash flow budgets required to have a complete business plan example for prospective farmers, lenders, and policy-makers.
