The proposal must include a project vision statement of long-range goals. Should the project be successful in its first two-year time period (Eleventh Work Plan), what further research would be proposed for subsequent projects for the Twelfth and Thirteenth Work Plans?

The project vision statement should include ideas for new and supplementary experiments, studies, and activities that would begin after this funding period (2005) and end two to three years later (2007–2008). In addition, the statement should describe a longer-term vision (10-year).

These new investigations should build on the findings from the initial two years of funding. This should be a detailed but concept-based statement and is limited to one page.
