The goal of the CRSP is to provide a basis for enhancing the development and sustainability of aquacultural production systems in order to improve food supplies and human nutrition on a long-term basis. Implicit in the CRSPs goal is the following mission:

- to raise small farmers’ incomes and increase consumers’ welfare by enhancing fish farm productivity;
- to improve the well-being of the rural poor; and
- to conserve or enhance the natural resource base.

The transfer of knowledge and technologies to practical recommendations is critical to the success of this program.

Please specify (1-page limit) how knowledge and results gained from this proposed project will reach farmers and other beneficiaries. Identify the extension or outreach groups you plan to work with (government agencies, nongovernmental organizations, private voluntary organizations, and others) and the communication mechanisms (publications, manuals, field trips, demonstrations, conferences) you or others (please identify who if not you) will use for transmitting research results to the target group (e.g., small-scale farmer).

If appropriate, please include an exit strategy. Indicate how the project collaboration or impact will be sustained beyond the life of the project (e.g., identify other possible sources of financial support or institutional commitments; groups who would be interested in the research results).
